	Dog Bite CHIEF COMPLAINT: Dog bite to his right lower leg. HISTORY OF PRESENT ILLNESS: This 50-year-old white male earlier this afternoon was attempting to adjust a cable that a dog was tied to. Dog was a German shepherd, it belonged to his brother, and the dog spontaneously attacked him. He sustained a bite to his right lower leg. Apparently, according to the patient, the dog is well known and is up-to-date on his shots and they wanted to confirm that. The dog has given no prior history of any reason to believe he is not a healthy dog. The patient himself developed a puncture wound with a flap injury. The patient has a flap wound SYMPTOM also below the puncture wound, a V-shaped flap, which is pointing towards the foot. It appears to be viable. The wound SYMPTOM is open about may be roughly a centimeter in the inside of the flap. He was seen by his medical primary care physician and was given a tetanus shot and the wound SYMPTOM was cleaned and wrapped, and then he was referred to us for further assessment. PAST MEDICAL HISTORY: Significant for history of pulmonary fibrosis DISEASE and atrial fibrillation DISEASE. He is status post bilateral lung transplant back in 2004 because of the pulmonary fibrosis DISEASE. ALLERGIES: There are no known allergies. MEDICATIONS: Include multiple medications that are significant for his lung transplant including Prograf, CellCept CHEMICAL, prednisone CHEMICAL, omeprazole CHEMICAL, Bactrim CHEMICAL which he is on chronically, folic acid CHEMICAL, vitamin D CHEMICAL, Mag-Ox, Toprol-XL, calcium CHEMICAL, 500 mg DOSAGE, vitamin B1, Centrum Silver, verapamil CHEMICAL, and digoxin CHEMICAL. FAMILY HISTORY: Consistent with a sister of his has ovarian cancer DISEASE and his father had liver cancer DISEASE. Heart disease DISEASE in the patient's mother and father, and father also has diabetes DISEASE. SOCIAL HISTORY: He is a non-cigarette smoker. He has occasional glass of wine. He is married. He has one biological child and three stepchildren. He works for		

Our next meeting will be held on Friday September 18th from 13:15 to 14:00 at Someroom or via Zoom

training dataset.

New York City hospital has 5★ ratings

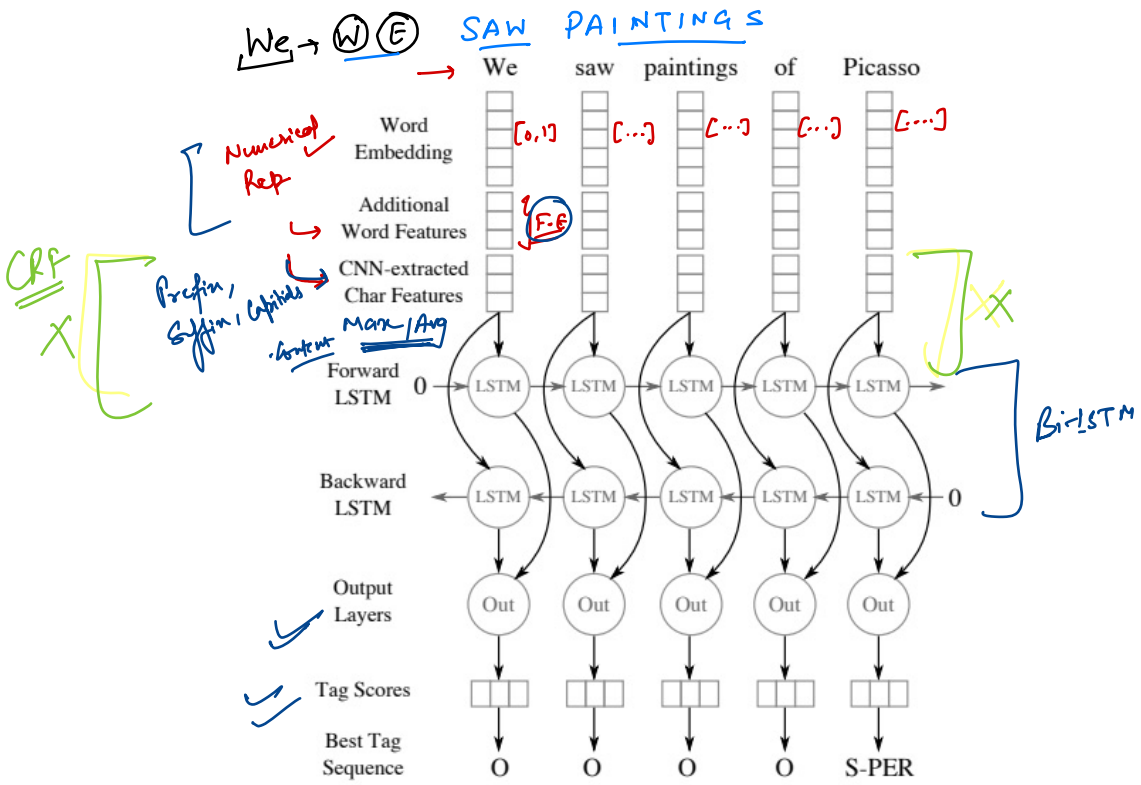

"Sequence" Labelling → RNN / LSTMs
+
CRF
Conditional Random Fields. ⇒ Notes

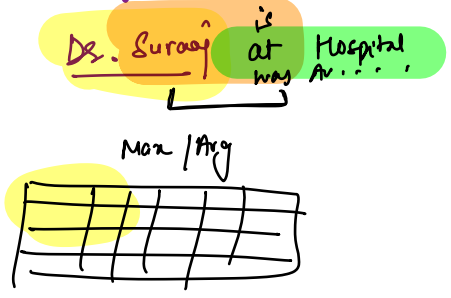

Sachin Tendulkar is a great player and he is elected from xyz constituency.

Left → Right

- Sequence Labelling
- ① Bi-directional LSTM + CRF
 - ② Bi-directional LSTM + CNN

✓ CNN → ✓ Prefix, ✓ Suffix, Capitalization, 55 Block D
Digit

CRF → POS Tagging → Eng → Adv Name
beautiful soul

Hugging Face → Finnis

Step 1: Get your Gemini API Key

Go to the [Google AI Studio](#) website and sign in with your Google account.

On the left-hand sidebar, click the **Get API key** button.

Click **Create API key in new project** (or select an existing one) to generate a new key.

Copy the generated API key string. [[1](#), [2](#), [3](#), [4](#), [5](#), [6](#), [7](#)]

Step 2: Add the Key to Google Colab

Open your notebook in Google Colab.

On the left-hand vertical toolbar, click the **key icon** (Secrets).

Click **Add new secret**.

In the **Name** field, type `GOOGLE_API_KEY`.

In the **Value** field, paste the API key you copied from AI Studio.

Toggle the switch for "Notebook access" to the ON position so your code can use it. [[1](#), [2](#), [3](#), [4](#), [5](#), [6](#), [8](#)]

Step 3: Use the Key in your Code

Run the following code in a Colab cell to install the library and authenticate using your stored secret: [[1](#), [2](#), [3](#), [4](#)]

python

```
# Install the Gemini SDK
!pip install -q -U google-generativeai

import google.generativeai as genai
from google.colab import userdata

# Retrieve the key from Secrets
GOOGLE_API_KEY = userdata.get('GOOGLE_API_KEY')

# Configure the library
genai.configure(api_key=GOOGLE_API_KEY)

# Test with a simple prompt
model = genai.GenerativeModel('gemini-1.5-flash')
response = model.generate_content("Hello!")
print(response.text)
```
